

Acknowledgements

I AM GREATLY INDEBTED to the following colleagues, who read the complete manuscript and whose comments have been extremely helpful: Robin Brett (U.S. Geological Survey); Bjørn Bølviken, Knut Heier (Geological Survey of Norway); Johannes Dons (Geological Museum, Oslo); Alfred Levinson (University of Calgary); Charles Sclar (Lehigh University); Denis Shaw (McMaster University); Cecil Schneer (University of New Hampshire); and Ellis Yochelson (Smithsonian Institution). Hans Wedepohl (University of Göttingen) provided interesting material and photographs from Goldschmidt's Göttingen days. Gerhard Regnell and Frans-Erik Wickman (University of Lund) provided copies of the Hadding-Goldschmidt correspondence, Carl Francis (Harvard University) copies of the Palache-Goldschmidt correspondence, and Kalervo Rankama and Martti Lehtinen (Helsinki University) copies of the Eskola-Goldschmidt correspondence. Professor Ivan Rosenquist, Dr. Leif Gjessing, and Dr. Nils Houge (Oslo) gave me their personal reminiscences of Goldschmidt. Gustaf Arrhenius (University of California, San Diego) was especially helpful on the relationship between his father-in-law, George de Hevesy, and Goldschmidt. I thank Mrs. Ruth Kullerud for the papers of her late husband, Gunnar Kullerud, relating to his proposed biography. Mrs. Harm Buning-Thomassen provided much useful information on the close association of her father, Lars Thomassen, and Goldschmidt in the 1919-1929 period. I thank my brother Alan for his help in compiling the glossary.

Alfred Levinson and Charles Sclar assembled most of the photographs reproduced in this book. Many of the photographs and the color plate appeared in *Applied Geochemistry* (Vol. 3, No. 4, 1988) and are reproduced with the kind permission of Dr. Brian Hitchon, Executive Editor, and Pergamon Press.

Financial support for this work has been provided by Norges Teknisk-Naturvitenskaplige Forskningsråd (Royal Norwegian Council for Scientific and Industrial Research) and the Scholarly Studies Fund of the Smithsonian Institution, and is gratefully acknowledged.
